

# Input/Output in Python

**Output**

# input() function

- To take dynamic user input from the user, python3 has introduced input() function.
- **Problem:->**
  - write a program to take user's name as input & print "Hello @Name"

# Code with output

---

```
name = input('Enter your name: ')\nprint('Hello ',name)
```

=> output:

Enter your name: PythonTechy

Hello PythonTechy

@pythonTechy

```
while(Infinite):  
    print("Thank you!!! ")
```

*Thank  
You*
